About Ungex

In 2011, Seyed Behbahani founded Ungex with the goal to help remove Demodex hair mites on people globally, by introducing a revolutionary new concept in mite removal technology. After six months of revising, testing and creating our product, followed by a year of extensive research and development, Ungex products were launched with much acclaim. In our first year of operation, Ungex was awarded the best invention award for 'Ungex Hair Mites Solution' at the 2012 Malaysia Expo.

We exist to help people experience relief from symptoms related to a high Demodex mite population density and we are passionate about helping our customers reclaim their skin from these parasites the right way. We believe in providing people with access to treatment that is not only effective, but also great for the skin, hair and face.

Ungex products are natural and herbal-based solutions, meaning that whilst they are effective at eliminating Demodex mite irritations, they will help to further restore your scalp, hair and skin's natural beauty.

What are Demodex Mites?

Demodex mites are microscopic parasites that live under hair follicles and oil glands, predominantly in the subcutaneous layers of the skin. They are generally found on facial skin, especially on the forehead, cheeks, nose, ears and scalp.

Although there are many species of Demodex mites, only two are found on humans, Demodex folliculorum and Demodex brevis. Demodex folliculorum is found in small hair follicles and feeds off the surrounding skin cells whilst Demodex brevis is found in the oil glands that are connected to the small hair follicles and feeds on the gland cells.

Due to the nature of their 'diet', in high population Demodex mites can cause a number of skin conditions and irritations. Some of these conditions include:

ROSACEA

AGEING SKIN

HAIR LOSS

ENLARGED PORES

ACNE

GENERAL DISCOMFORT

ITCHING

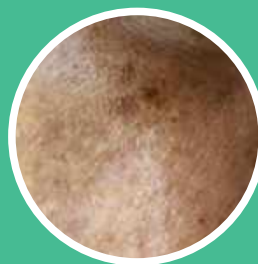

ATOPIC DERMATITIS

THINNING HAIR

ROUGH SKIN

FACIAL DISCOLOURATION

FRECKLES

Generally, people who have high numbers of mites on their skin may not even realise that Demodex mites are linked to their skin. Often they will be tested for other skin conditions and are alerted to the presence of these mites. Even when Demodex mites are present and causing skin issues, your doctor must be able to know what they are looking for and where to search in order to provide a correct diagnosis.

That sudden itch you feel at night or that dry, flaky skin that just won't seem to clear may be a sign that you have an overabundance of Demodex mites. When symptoms are present, they should be treated quickly and effectively.

How do I know if I have Demodex mites?

Demodex mites are common on almost all people. They are not common on children under the age of five and are less common in older children, however; studies show that Demodex mites are present in every adult over the age of eighteen.¹

It is especially important for people who suffer from rosacea to be mindful of the presence of Demodex mites, as they are 15 to 18 times more likely to have a higher population of mites than people who do not suffer from rosacea.²

Take the Demodex mite density quiz to find out if Demodex mites are playing a role in the health of your skin!

How to Treat Demodex Mites

Although sometimes, home remedies are recommended for people who are suffering from skin irritations due to Demodex mites, none of these home remedies are proven to eliminate symptoms and therefore, simply do not work. Through extensive research, Ungex have developed a Demodex mite solution that is proven to provide effective results.

Demodex mites are very quick to spread from one person to another, especially within the same household. For this reason, quick and effective elimination of a mite infestation is very important to help stop the spread of Demodex mites. This can only be achieved by using Ungex's specially formulated scalp, face and body products. Ungex products help both eliminate and prevent mites.

In order to provide the best relief for the skin, it is important that you use products with natural ingredients. Ungex products are formulated using natural based ingredients to ensure that they are gentle on your skin, but not on Demodex mites

How Long Does Treatment Take?

Since Demodex mites reproduce quickly, if not treated, numbers can increase rapidly on individuals and members of the same household too. For this reason, each person will have different levels of infestation. Some people can begin to experience relief as soon as one week after starting their treatment, whilst others may require a longer period to effectively manage a Demodex mite infestation.

Our product bundles will give you an initial three months of treatment and protection from Demodex mites. This initial three-month treatment period allows time for all generations of Demodex mites to be eliminated, leaving your skin feeling and appearing rejuvenated.

It is important to understand that symptoms of a high Demodex mite population density aren't permanent and can be cured effectively with Ungex skin and hair products. There's absolutely no need to put up with irritated skin, itching and hair loss.

Preventive care is also very important to consider in the form of ongoing treatment as a safeguard against future issues from arising. Speak with a Demodex consultant who can advise on the most effective treatment option for you.

The Ungex Protocol

All Ungex products to be used at night on damp skin. Shake bottles before use.

1. Invigorating & Purifying Shampoo (PS & IS):

Use on alternate nights to each other (one per night) on nights when skin is dirty-varies on environment, physical activity, unpleasant odour, etc.

1. For use on scalp, face and body as needed
2. Rinse as soon as you have finished lathering, do not leave on for extended amount of time
3. Rinse off with warm water
4. Use cool water on affected areas before exiting shower

Hint: on days where you don't use shampoo you can just shower with plain water.

2. Treatment Hair Tonic (THT): (Essential Kit A1 and Bundle 1)

Use every night.

1. Spray on scalp only
2. Massage with fingertips
3. Do not rinse

Hint: In special cases and with the advice of a Demodex Consultant THT can be used in the morning.

3. High Frequency Instrument (HFI): (Bundles or 3rd party)

Can be used over scalp, face and body.

1. Use on dry skin
2. Select appropriate attachment
3. Make contact with skin
4. Massage on or around problem areas in circular motions

Hint: Frequency of use is minimum once a week up to once per night. Use for at least 10 minutes, not leaving in one place for more than 10 seconds.

The Ungex Protocol

All Ungex products to be used at night on damp skin. Shake bottles before use.

4. Pro D'modex Treatment (PDT):

Helps kill mites directly, use every night.

1. Spray problem areas directly
2. Can spray on upholstery items (pillow cases, towels, combs etc.)
3. Do not rinse

Hint: Those with sensitive skin or severe symptoms may need to introduce PDT slowly. In the case you experience this please follow the following and contact Ungex directly.

PDT Method (Slightly sensitive):

50/50 mix PDT with water and gradually increase ratio

PDT Method (Super sensitive skin):

- 1st week 2 parts PDT to 10 parts water
- 2nd week 4/10 to 10 parts water
- 3rd week 7/10 to 10 parts water
- 4th Week Full strength PDT

Die-off reaction:

Also known as healing reaction can sometimes be experienced in those with a high population of Demodex mites during the first months of treatment. This is normal and a good sign that products are doing their job.

NOTES:

- All products (except THT) can be used over the whole body.
- Avoid things like moisturisers and hair conditioners, as they may feed the mites.
- Organic cold pressed extra virgin coconut oil can be used to add moisture as needed and will not feed mites.
- Avoid repeat use of towels, hair brushes and pillowcases, etc. as mites can cross transfer. To combat this, you can leave them in the sun for a few hours each day or exchange them for clean items. If you can't do this spray with PDT nightly before bed.
- All products are required to be used in the Ungex protocol, although the most important role is the PDT spray.
- The best time to use all products is at night before bed.
- Please contact Ungex directly with any concerns for best advice.
